Welcome!
Let's get started by installing the needed CLIs, setting up your first private registry namespace, and pushing your first image.
Install, Set Up, and Log In
1. Install the IBM Cloud CLI.
2. Install the Docker CLI.
3. Install the Container Registry plug-in.
ibmcloud plugin install container-registry -r 'IBM Cloud'
4. Log in to your IBM Cloud account.
ibmcloud login -a https://cloud.ibm.com
If you have a federated ID, use ibmcloud login --sso to log in to the IBM Cloud CLI.
5. Ensure that you're targeting the correct IBM Cloud Container Registry region.

IBM Cloud Command Line Interface - InstallShield Wizard
Welcome to the InstallShield Wizard for IBM Cloud Command Line Interface
The InstallShield(R) Wizard will install IBM Cloud Command Line Interface on your computer. To continue, click Next.
After the installation is complete, you can get started by opening a command prompt and entering "ibmcloud".
For usage and a list of available commands, enter "ibmcloud help".
To get help on a particular command, enter "ibmcloud <command_name> --help".
For example:
ibmcloud login --help
For getting started tutorial and other documentation, visit here: https://cloud.ibm.com/docs/cli

IBM Cloud Command Line Interface - InstallShield Wizard
The installation completed successfully
To get started, open a terminal window and enter "ibmcloud help". Refer to http://ibm.biz/cli-auto-completion if you want to enable auto-completion for zsh or bash.
IBM Cloud Command Line Interface has a plug-in framework to extend its capability. To install recommended plug-ins and dependencies, run the install script from http://ibm.biz/install-idt. For additional plug-in details, see http://ibm.biz/install-cli-plugin.
Starting from version 1.0.0, IBM Cloud CLI no longer bundles the Cloud Foundry CLI by default. To run Cloud Foundry commands via the IBM Cloud CLI, you need to install the Cloud Foundry CLI through "ibmcloud cf install" command.
